

**Bahasa Melayu In The Standard Five Assessment Examination, 1967.** Farid M. Onn.  
[\*Akademika 1\*](#) (1972)

**ABSTRAK**

Kertas Bahasa Melayu untuk Peperiksaan Penilaian Darjah Lima, yang diadakan pada bulan Oktober 1967, dikaji bagi menentukan peringkat kepayahannya. Item-item ujian dianalisa berdasarkan pada 'Fan's Table of Item Difficulty and Item-Discrimination Indices'. Pengiraan untuk mendapatkan 'reliability coefficient' kertas ujian dilakukan mengikut kaedah 'split-half' dan 'Spearman-Brown prophecy formula'. Bertentangan dengan banyak pendapat, peringkat kepayahan kertas ujian ini didapati sederhana, dan ia mempunyai reliabiliti yang cukup untuk membuat diskriminasi. Perbincangan mengenai kesalahan-kesalahan yang terdapat dalam jawapan murid-murid juga dikemukakan.

**ABSTRACT**

*The Malay paper for the Standard Five Assessment Examination held in October, 1967, is here studied to assess its level of difficulty. The test items were analysed based on Fan's Table of Item-Difficulty and Item-Discrimination Indices. The reliability coefficient of the test paper was computed by correlating the test scores using the 'split-half' method and the Spearman-Brown prophecy formula. Contrary to many opinions, the test reveals an average difficulty level as well as sufficient reliability for discrimination. Some discussions on pupils' errors are also presented.*
